WELCOME TO ALSHEES CRANE SERVICES LLC ABOUT US

We are trusted provider of industrial lifting solutions, recognized for the supply of high-quality cranes, genuine spare parts, and specialized maintenance services. We offer a comprehensive range of industrial cranes, including overhead cranes, gantry cranes, jib cranes, monorail cranes, explosion-proof (Ex-proof) cranes, lifting gears, and other material handling equipment. Our solutions are designed to meet the diverse operational requirements of industries while ensuring safety, reliability, and efficiency.

Our mission is to achieve the highest level of customer satisfaction by delivering prompt and reliable sales and support services.

We supply market-leading & industry-proven cranes and hoists.

OUR APPROACH

We approach every project with professionalism, technical expertise, and innovative solutions to ensure we meet the unique requirements of our customers. Our goal is to keep your cranes operating safely, efficiently, and reliably while significantly extending their service life through quality maintenance and engineering solutions.

Our highly skilled service technicians are experienced in carrying out major repairs, refurbishment, preventive and corrective maintenance, installation, and commissioning of all types of industrial cranes. We specialize in overhead (EOT) cranes, gantry cranes, jib cranes, monorail cranes, explosion-proof cranes, and other material handling equipment.

OBJECTIVE: Our objective is to enhance the safety, productivity, and sustainability of our clients' operations by providing reliable and high-quality crane services. Our experienced and well-trained service team, supported by qualified service engineers, conducts comprehensive inspections to evaluate the condition of each crane and identify any potential issues before they become critical.

INDUSTRIAL CRANES:

Our experienced team uses advanced technology and engineering expertise to deliver safe, reliable, and efficient lifting solutions for a wide range of industries. We proudly serve both local businesses and multinational companies, providing high-quality cranes, spare parts, and professional services. Our commitment to quality, safety, and customer satisfaction is what sets us apart.

WHAT WE DO

INDUSTRIAL CRANES

SINGLE GIRDER CRANE

Our Single Girder EOT Cranes are compact, lightweight, and ideal for facilities with limited headroom and floor space. As a leading supplier, we design cranes that prioritize safety, reliability, and operational efficiency. Available in both standard and custom-built configurations, our cranes are tailored to meet the specific lifting capacity, span, and operational requirements of each customer.

DOUBLE GIRDER CRANE

Our Double Girder EOT Cranes are top-running cranes designed to provide maximum overhead clearance, higher hook lift, and superior lifting performance. We supply both standard and customized cranes to meet the specific requirements of industries such as steel plants, power plants, waste-to-energy facilities, and other demanding environments with high temperatures, dust, and heavy-duty operations.

Engineered for safety and reliability, our cranes incorporate enhanced-duty components, high-performance gear reducers, redundant critical systems, backup drum brakes, and motion limiters to ensure efficient, safe, and dependable operation under the toughest working conditions.

JIB CRANE

WALL MOUNTED JIB CRANE:

We supply and install Wall-Mounted Jib Cranes to suit a wide range of workstation lifting applications. Wall-mounted jib cranes are ideal for workstations located near walls or structural columns, while column-mounted jib cranes provide an independent lifting solution where no suitable support structure is available. Designed for safety, efficiency, and ease of operation, our jib cranes are available in standard and custom configurations to meet specific customer requirements, including special mounting solutions for RCC columns.

PILLER MOUNTED JIB CRANE

Our Jib Cranes are designed to improve workstation efficiency by enabling quick and independent material handling, reducing reliance on overhead cranes. Available in both column-mounted and wall-mounted configurations, they offer smooth 360° rotation for easy handling of heavy loads. Ideal for loading, unloading, assembly lines, and machine operations, our jib cranes are low-maintenance, reliable, and available in standard or custom designs with lifting capacities of up to 6.3 ton to meet specific application requirements.

Industrial Cranes, Workshop Cranes, Power Plant Cranes, Waste to energy Plant

GANTRY CRANE

Gantry Cranes are widely valued for their versatility, simplicity, and cost-effectiveness. Suitable for both light and heavy-duty applications, they are commonly used in steelyards, mining operations, maintenance work, and small construction projects. Their compact design allows maximum utilization of floor space, while offering flexible operation in both indoor and outdoor environments, making them a reliable solution for efficient material handling.

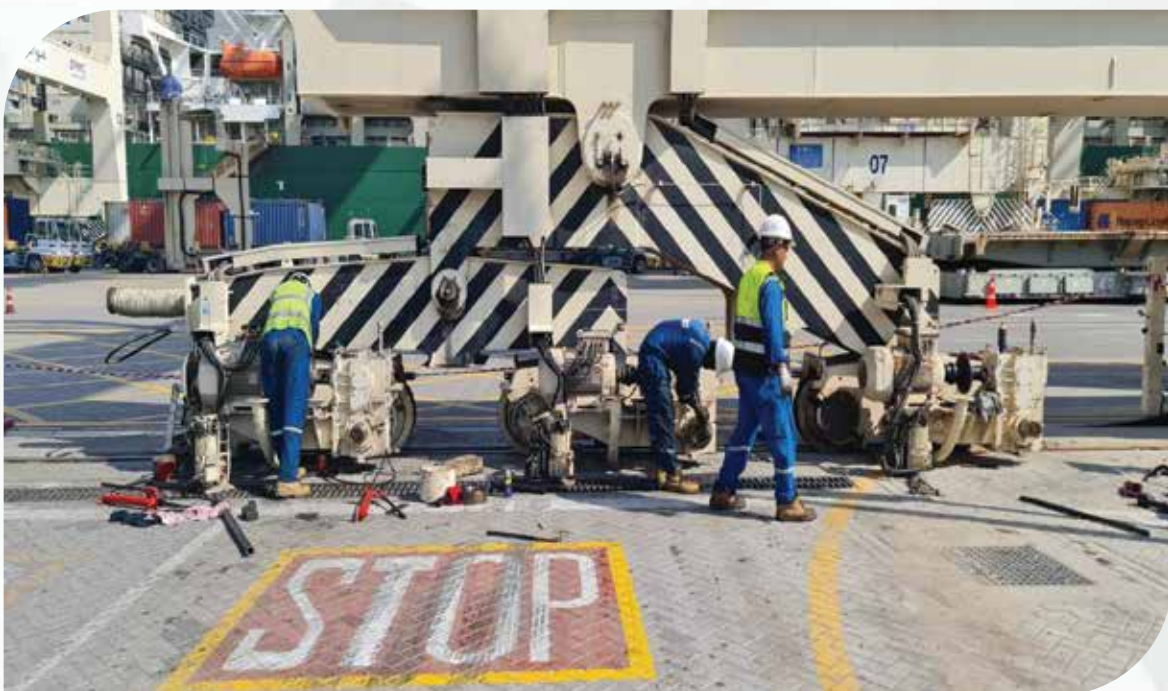

Our cranes are designed and engineered to support a wide range of lifting and material handling applications, enhancing operational efficiency and productivity. Equipped with various hoists and high-quality components, they provide reliable performance across diverse industries and working conditions.

Each crane is designed with advanced safety features and control systems tailored to specific applications and environments, ensuring safe, efficient, and dependable operation.

CRANES

SERVICES & MAINTENANCE:

- ❖ We offer comprehensive crane services including Annual Maintenance Contracts, troubleshooting, refurbishment, breakdown support, and preventive & predictive maintenance. Our services are designed to ensure maximum equipment reliability, reduced downtime, enhanced safety, and extended crane life through regular inspection and timely intervention.
- ❖ We provide preventive and corrective maintenance services for all types of cranes, including EOT cranes, gantry cranes, jib cranes, monorail cranes, and explosion-proof (Ex-proof) cranes. Our services ensure safe, reliable, and efficient operation by minimizing breakdowns, improving performance, and extending equipment lifespan.
- ❖ We provide complete crane installation and commissioning services, ensuring smooth execution from project initiation to final handover. Our process is focused on meeting customer requirements with precision, safety, and efficiency, delivering complete satisfaction through reliable and fully operational crane systems.
- ❖ We offer long travel rail refurbishment and alignment services supported by precise geometric analysis of crane systems. This ensures accurate alignment and smooth operation, helping to prevent wheel wear, rail damage, structural failures, and drive system faults. Our solutions enhance crane performance, reliability, and service life while reducing maintenance costs and downtime.

SERVICES & MAINTENANCE

We offer comprehensive and versatile services for a wide range of industrial cranes, including overhead cranes, gantry cranes, jib cranes, monorail cranes, explosion-proof (Ex-proof) cranes, and lifting equipment. Our expertise covers complete crane refurbishment, repair, and repainting to restore optimal performance and safety.

Our services include:

- ❖ Hoist mechanism overhaul
- ❖ Gearbox repair and maintenance
- ❖ Long travel rail refurbishment and alignment
- ❖ Crane installation
- ❖ Testing and commissioning
- ❖ Third-party load testing and certification

ELECTRICAL PANEL DESIGNING

We design and supply customized crane control panels using advanced technology and robust box-type construction suitable for bridge girders. Our control panels are engineered to ensure smooth stress distribution and reliable performance under demanding operating conditions. Using high-quality electrical components and modern technology in compliance with industry standards, they are tailored to meet diverse customer requirements. We also offer complete refurbishment and upgrading of existing control panels to enhance operational efficiency, safety, and ease of use.

CRANE REFURBISHMENT

We provide complete crane refurbishment services, where the crane is carefully dismantled, and its lifting mechanisms are inspected, repaired, or replaced as required before reassembly. Each crane undergoes thorough reinspection by our engineers to ensure safe operation, followed by full refurbishment, certification, and return to service.

We also offer crane modernization solutions to extend the operational life of existing systems. This is a cost-effective alternative to new installations, helping businesses achieve improved performance and updated safety standards.

Our expertise covers complete electrical and mechanical refurbishment and modernization for overhead cranes, gantry cranes, jib cranes, monorail cranes, and other lifting systems.

LOAD TESTING & CERTIFICATION

Crane load testing and certification are critical to ensuring safe and reliable crane operation. Load tests are conducted by applying rated loads to verify that the crane structure and components perform in accordance with design specifications. These tests are carried out by qualified and experienced personnel to ensure structural integrity, operational safety, and compliance with industry standards.

We provide third-party load testing and certification services for cranes of various capacities through authorized agencies. This ensures compliance with local regulations and international standards (including BS standards), while verifying the safe and efficient performance of all crane components.

CRANE WHEEL SUPPLY REPLACEMENT

Overhead crane wheels are a critical component of the crane traveling system and are subject to high wear due to constant contact and friction with the rails. Over time, issues such as flange wear, flange breakage, and surface fatigue may occur, requiring timely inspection and replacement to ensure safe operation.

We provide comprehensive crane inspection services to identify the root causes of wheel damage, including misalignment and structural issues. Our specialized team ensures precise correction of alignment problems and delivers effective solutions to restore smooth, safe, and reliable crane operation.

CRANE RAIL ALIGNMENT SURVEY & RECTIFICATION

Crane traveling rail misalignment can lead to excessive stress on runway beams and supporting structures, resulting in accelerated wheel wear, bearing failures, and additional strain on drive systems and other components.

Our experienced team conducts detailed inspections of rail alignment and mounting conditions to ensure proper installation within permissible tolerances as per relevant standards. This helps enhance crane reliability, stability, and overall operational safety.

CRANE INSTALLATION & COMMISSIONING

Crane installation and commissioning is a key part of our after-sales services, ensuring safe and efficient setup of overhead cranes, gantry cranes, jib cranes, and other industrial crane systems. Our expertise in installation and erection guarantees optimal performance, safety, and maximum value from your investment.

We carry out installation as per project schedules, followed by complete commissioning, testing, and reporting to ensure proper functionality and compliance. In addition, we provide professional training for crane operation and maintenance to support safe and efficient use.

Our services include:

- ❖ Overhead travelling crane installation
- ❖ Gantry crane installation
- ❖ Slewing jib crane installation
- ❖ Custom industrial crane installation
- ❖ Surface preparation and painting of cranes and supporting structures
